MANAGE ALL EMS + HOSPITAL COMMUNICATIONS, INFORMATION AND DOCUMENTATION ON ONE INTEROPERABLE, EASY-TO-USE SYSTEM

900 + HOSPITAL INSTALLS
Handling 18,000 + Emergency Calls Daily
**Simplify EMS + Hospital**

**COMMUNICATION + DOCUMENTATION WITH GD CAREpoint™**

Emergency departments have to be ready for anything. Get ready for what’s coming with the GD CAREpoint™ Workstation. Receive, respond, forward and document all EMS to hospital communications on one easy-to-use system.

**MAIN USES**

Team Communications, Data Collection and Sharing For:
- Stroke
- Sepsis
- Trauma
- 12-Lead Management
- Q/A Training
- Trend Reports
- Documentation
- Burns
- Mass Casualty
- MIH/CP
- Alert Notifications
- Transfers
- STEMI
- Log Recording

**GD CAREpoint™ FEATURE APPS**

- **Remote Control**
  Medical teams can answer EMS phone or radio calls from any mobile device allowing them to freely move about the ED and even other areas of the hospital.

- **Voice Acknowledge**
  With this radio resource you never leave EMS or Hospital Teams in the dark. This pre-recorded custom message or announcement can be used a number of ways; eliminating repeat calling, unannounced EMS arrivals, unprepared teams and more.

- **Radio And Call Recording**
  No other solution records phone calls and radio transmissions between EMS and Hospitals in a centralized, feature-rich EMS communication system.

**GD CAREpoint™ IS VERY EASY TO USE. THE ENGINEERING OF GD’S PRODUCTS, THE SERVICE AND COMMITMENT TO QUALITY AND CUSTOMER CARE HAS KEPT OUR BUSY URBAN SYSTEM IN THE FOREFRONT OF EMS.**

- Mark Veenema, Director, Mobile ICU, St. Joseph’s Regional Medical Center, Paterson, NJ
• **Instant Recall**
  With the click of a button, you can instantly access prior calls made or received from your interactions with EMS. You can use these recorded conversations to immediately capture any information which may have been missed or misunderstood during your calls. The recorded calls can also be forwarded to any designated specialist via secure message.

• **Team Notifications**
  Easily set up one-touch or even automated notifications to be sent to select team members. For example, if a stroke patient is coming in, a notification with ETA tracking can be sent right to the cardiologist, along with 12-lead reports, vitals and patient information.

• **12-Lead Management/Sharing**
  You can electronically accept, store and even share the actual 12-lead files from any 12-lead vendor/monitor, regardless of the format. Other systems only capture a picture of the 12-lead. With GD, you receive the actual file and can view the entire report and share it with the rest of the medical team. You can even set up automatic forwarding rules.

• **Electronic Forms**
  Automatically convert your handwriting into digitally secure information that is reportable throughout your health network. All data is centralized and available to authorized users from anywhere via computer, laptop, tablet or smart phone.

• **Data Consolidation and Reporting**
  D-Scribe records and reports on all the radio and phone calls that come into the ED along with recording 12-lead data, forms, chart data, faxes, e-mails and more for EMS, pre-hospital and acute care teams. This information and audio is accessible through any networked computer, even remotely connected ones.

• **Analytics and Reports**
  Turn your patient, treatment, diagnostic and workflow data into insightful reports which you can use to assess performance, staffing levels, efficiencies and more. Many canned reports are available or you can create your own.
