

HOSPITALS SAVE BIG

with Emergency Department Solutions like **GD CAREpoint™**

GD CAREpoint™ is the most comprehensive and feature-rich medical telemedicine communication solution available today. Aside from radically accelerating and enhancing acute care capabilities, this all-in-one EMS workstation brings significant cost savings to hospitals and their EDs. GD CAREpoint™ checks the boxes of multiple medical communication, notification, timestamping and documentation systems in one. Thereby, saving the costs of purchasing multiple products separately and attempting to centrally integrate them.

HERE ARE SOME OF THE MANY AREAS IN WHICH GD CAREpoint™ SAVES HOSPITALS MONEY:

STAFFING

EDs can reduce staffing levels by enabling nurses or doctors to answer EMS calls anywhere remotely via mobile device which includes radio and telephone calls with less staff.

Nurses and doctors do not have to use multiple systems to access all patient, diagnostic, treatment information. The complete electronic patient record can be accessed in one centralized location.

REVENUE

You will increase revenue as paramedics will send more patients to your facility; remote call answering enables your staff to answer EMS calls on their first try. Medics favor the ED that will answer their calls right away.

EFFICIENCIES

Your teams will save tremendous time recalling and replaying past communications with instant recall capabilities, which immediately replays past communications. This saves both time and money.

Your nurses and doctors will avoid typing in hand-written notes by entering patient information from EMS right into a digital form which can go into the electronic patient health record which could be immediately accessible to authorized staff via mobile device.

“
With all that GD CAREpoint™ does, it's amazing just how fast and easy it is to use – it is a real time-saver for me and my staff.
It is clear to us that GD CAREpoint™ is a big factor getting our calls answered quickly.”

OPERATIONAL EXCELLENCE

Supervisors and quality improvement specialists can increase efficiencies plus reduce costs by monitoring the communications between nurses, medical staff and EMS for benchmarking, training and process improvements.

RESOURCE ALLOCATION

Save tens-of-thousands of dollars by avoiding false lab activations. Your team will have access to the most accurate and timely patient and diagnostic data to ensure lab activations are made correctly and only when necessary.

You will avoid purchasing multiple, independent solutions, such as telemedicine communication, notification, radio consolidation, audi & media recording, documentation, timestamping, automation workflow and reporting to satisfy the needs of what one GD CAREpoint™ can accomplish.

GD CAREpoint™ IS GREATER THAN THE SUM OF IT'S PARTS!

- Reduce door-to-treatment times for stroke, STEMI and trauma.
- Provide advanced notifications to remote cardio, neuro and trauma teams.
- Simplify and unify reception, distribution and documentation of prehospital ECGs to the entire team.
- Complete documentation of all voice and data for QA and risk management.
- Suite of data management tools for facilitating CQI and risk reduction.
- Consolidate ED communications equipment to simplify operation and free up counter space.
- Improve call handling, notification, preparation for improved EMS patient in-take and faster care.
- Improve workflow with enhanced data management and trending information from electronic forms.

ABOUT GD

GD enables smarter patient care by empowering hospitals, EMS, MIH/CP and public safety with the most comprehensive, configurable, integrated and affordable medical team communications. This is done with two primary GD solutions, the GD CAREpoint™ all-in-one ED Workstation and GD e-Bridge™ the Mobile Telemedicine and notification app. The benefits of which are enhanced workflows, minimized risk, reduced costs, and improved patient outcomes.
