

12-Lead MODULE

GD Enhances it's Mobile Telemedicine App, ANDROID VERSION + ANNOUNCES AMBULANCE GEO - TRACKING

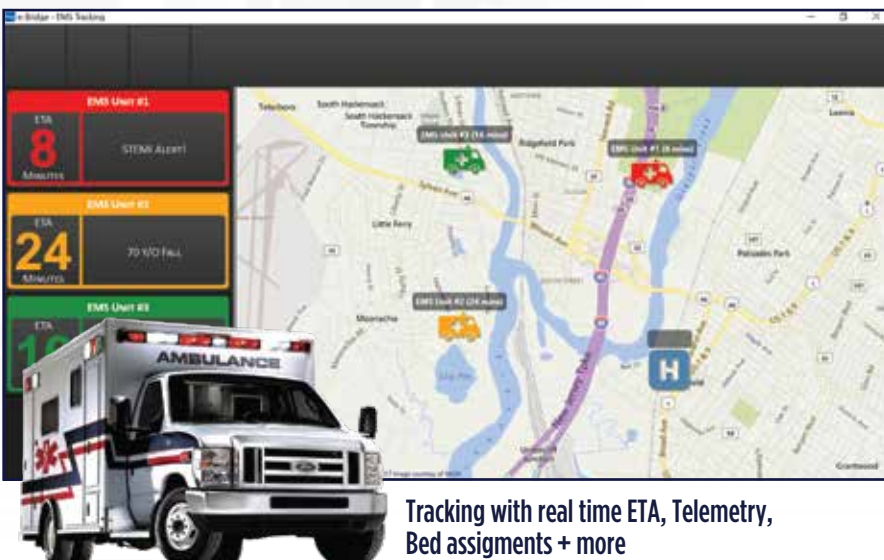

12-Lead ECG reports are critical to acute care, and the ability to easily and instantly access and clearly view them is imperative to EMS and EDs. With our GD CAREpoint™ EMS workstation and GD e-Bridge™ Mobile Telemedicine solution, you can store all of your 12-Lead online for immediate access whenever needed. In fact, our solutions provide unified 12-Lead capture, storage and management. We are brand agnostic in that regard and can accept and aggregate 12-Lead from every manufacturer or system, regardless of the format

Any 12-Lead from anywhere to anywhere with one-click, it's that simple!

No more life-saving decisions without 12-Lead verification. That's right! GD CAREpoint™ is an FDA listed, HIPAA compliant device that receives 12-Lead from multiple monitors. Not receiving 12-Lead leaves too much room for error causing hospitals to lose money with false lab activations; send 12-Lead data, send photos or faxes of 12-Lead.

12-Lead Management Screen

Tracking with real time ETA, Telemetry, Bed assignments + more

With GD CAREpoint™ Sharing it's easy; you can store, share, and forward 12-Lead anywhere with a few simple clicks or with automatic forwarding rules. This is an improvement in how physicians receive and review 12-Lead, archive, review past patients, and generate trending reports.

Knowledge is power and helps with patient preparation. GD CAREpoint™ is simply powerful and with over 900 hospital installations and 20 years of experience in pre-hospital technologies, GD CAREpoint™ is the preferred method for 12-Lead consolidation, sharing and management.
