

# Carepoint 2

## All EMS Communications, One Powerful Workstation.

Hospital Emergency Departments must be ready for anything, and managing prehospital patient care isn't easy. With massive amounts of information and all types of communication to juggle—phone and radio calls, forms, emails and faxes, video, data, physical patient handoff from EMS—EDs need less equipment and more efficient solutions.

The CAREpoint workstation keeps all EMS communications in one place. It enhances coordination of care between communities and regions, EMS/fire and hospitals through call management and recording (EMS radio and phone inbound calls), data sharing, unified 12-lead management and more. This single workstation can be accessed onsite and remotely to minimize communication breakdowns, risk to patients and costs.

### BENEFITS & ROI

- Better preparedness for incoming patients through improved EMS and hospital communication for more efficient patient hand-off
- Simplified and standardized 12-lead management
- Improved quality assurance and legal documentation with time-stamped data and voice logging, recording & reporting that saves management time
- Cost savings on activations, documentations and equipment consolidation
- Telehealth & Telemedicine ready with e-Bridge

### Carepoint 2 FEATURES:

**Instant Recall** allows hospital teams to easily replay the most recent calls and securely forward the call audio with e-Bridge.

**D-Scribe** log recorder empowers hospitals with remote and centralized access to HIPAA secure voice and data communications with powerful reporting.

**Remote Control** is a remote control app that allows radio and voice call handling from an iPad.

**AMITA Health St. Joseph Hospital** in Illinois saved \$8,000 annually by using the forms features in their CAREpoint and cancelling their third party forms solution.

**Banner Boswell Medical Center** in Arizona achieved a door-to-needle time of 18 minutes by using CAREpoint to manage EMS calls.

**Southeast Health Medical Center** in Alabama decreased their door-to-needle times by 15 minutes (20%), improved their door-to-physician time by 2.4 minutes (29%) by using e-Bridge and CAREpoint to manage all EMS-related activities, including prehospital stroke notifications and creating an overhead paging system for case alerts.

### Schedule a conversation!

To learn how you can get the greatest possible ROI by using CAREpoint and other GD mobile telemedicine solutions to the full extent of their capabilities.
