

All Patient, EMS and Hospital Voice and Data in One Place.

Coordinators, managers and quality assurance teams require easy, full reporting of pre-hospital and hospital communications data and metrics. D-Scribe is an information hub that meets this demand for hospitals and EMS/fire teams through remote and centralized access to all the data and reporting they need to promote a quality system.

D-Scribe automatically records and organizes all data for CAREpoint Workstation, including radio and phone calls to the ED, 12-lead data, forms, chart data, faxes and emails. Hospital teams can easily and instantly export calls for risk management, training and legal purposes. The ability to build custom reports on any metric aids in improving workflows, assessing staff and expanding to new initiatives.

D-Scribe X enables automatic recording and reporting of data for e-Bridge. It empowers medical teams with secure access to all pre-hospital and hospital videos, images and voice communication, data and reports. Case management and team and process workflows are more efficient with easier access to information for quality assurance, benchmarking, certifications, training and legal purposes.

BENEFITS & ROI

- Simplified retrieval and sharing of call information
- Improved quality assurance with voice and data logging and recording
- Risk mitigation with legal documentation and secure storage
- Cost savings on documentations and consolidation
- Custom reporting

Baystate Health in Massachusetts saved \$8,000 with the elimination of additional systems for 12-lead storage.

County of LA Fire Department in California reduced transports by 3% with D-Scribe X and e-Bridge.

Rush Copley Medical Center in Illinois achieved an average EMS-hospital patient hand-off of 3 minutes using D-Scribe and CAREpoint.
