

Telehealth Advantages for EMS Providers

Effective EMS-Hospital Communication through Mobile Telemedicine and Telehealth Makes Patient Care Seamless

When first responders have the resources to communicate important information to hospitals quickly, efficiently and clearly, patient care is improved, door-to-treatment times are reduced, and valuable time and money is saved.

- **Pre-arrival** patient registration aimed at speeding hand-off and reducing wall time
- **Treatment in Place, ET3,** and MIH-CP Telehealth support
- **Alerting Notifications and Activation** from EMS to all team members, including real-time ETA tracking
- **HIPAA-compliant** sharing of pictures, audio, video and live streaming for real-time medical direction
- **Telehealth Video Conferencing** with EMS in the field – from treat in place to acute care consultation, MIH-CP and more
- **Streamlined Documentation,** time-stamping and storage of case data, including EMS-hospital calls, 12-leads, forms, chart data, reports, faxes, emails, videos, images and voice communication
- **Streamlined Sharing** face sheets and outcomes data from the hospital back to EMS

Hospitals using GD's solutions experience:

- Easier, faster team communications in real time
- Quicker and more efficient patient hand-off and reduced wall time
- Faster time-to-treatment
- Improved quality assurance and risk reduction with full documentation and recording of voice, video and data.
- Ability to receive face sheets and outcome data from the hospital

is a mobile telemedicine app that enables EMS and hospital teams to share pictures, audio, video and livestream.

empowers medical teams and EMS providers with remote and centralized web access to all pre-hospital and hospital communication, data & reports
