Communication Advantages for Hospitals

Effective Hospital-EMS Communication

When hospitals have the resources to communicate quickly and clearly with the first responders in the field and easily manage pre-arrival information, patient hand-off is more efficient, time-to-treatment is decreased, hospital team resources are better allocated, money is saved, risk is reduced, and outcomes are improved.

GD's all-in-one, fully configurable solutions enable hospitals to enhance quality of care through:

• **Pre-arrival** patient registration aimed at shortening hand-off and reducing wall time

• **EMS Call Answering** throughout the ED for radio, phone, and telehealth

• **Alerting Notifications and Activation** from EMS to all team members, including real-time ETA tracking

• **HIPAA-compliant** sharing of pictures, audio, video and live streaming for real-time medical direction

• **Telehealth Video Conferencing** with EMS in the field – from treat in place to acute care consultation, MIH-CP and more

• **Streamlined Documentation**, time-stamping and storage of case data, including EMS-hospital calls, 12-leads, forms, chart data, reports, faxes, emails, videos, images and voice communication

• **Streamlined Sharing** of face sheets and outcomes data from the hospital back to EMS

Hospitals using GD's solutions experience:
• Better preparedness for incoming patients
• Quicker and more efficient patient hand-off and reduced wall time
• Faster time-to-treatment
• Easier, faster team communications in real time
• Improved quality assurance and risk reduction with full documentation and recording of voice, video and data.
• Easy retrieval of case information with time-stamping, recorded audio and video and central storage
• Cost savings on reductions in re-admits, activations, documentations and consolidation

e-Bridge

A communication platform that enables EMS and hospital teams to share pictures, audio, video and live stream.

CAREpoint

Consolidates EMS Communications and telehealth, including forms data, 12-leads, and calls.

D-ScribeX

Stores all patient, EMS and hospital data in one place.
