The Benefits of Seamless Resources for Prehospital Communication

First responders having the resources to communicate important information to hospitals quickly and clearly before the patient arrives is critical to improving patient care and reducing door-to-treatment times. "The solution for that patient will not be ready if you have not activated us and communicated with us at the very beginning," says Baystate Health's Nathan Stanaway MS, who uses GD's e-Bridge Communication Platform and D-Scribe-X.

The Value of Communicating Through e-Bridge, CAREpoint, and D-Scribe X

- *Easier, faster team communications*
- *More efficient patient hand-off*
- *Reduced wall time*
- *Faster time to treatment*
- *Improved quality assurance and risk reduction*
- *Face Sheets and outcome data*
