

e-Bridge Connect

Providing Value to EMS and Hospitals

During time-sensitive medical emergencies, every minute counts. When over 900,000 people die each year as a result of time-sensitive medical emergencies in the United States, an efficient pre-hospital notification process can make all the difference for patient outcomes.

e-Bridge Connect

With multiple communication channels available for connecting EMS and hospital personnel, e-Bridge Connect offers all of the features of e-Bridge Alert [alerting and notifications, as well as automatic ETA] with the added benefit of HIPAA-secure sharing of text, voice, photo, video and live telehealth communication options. Hospital teams are given the advantage of knowing a patient's needs before they ever pass through their doors.
