

e-Bridge Interpreter

Enabling Communication in Any Situation

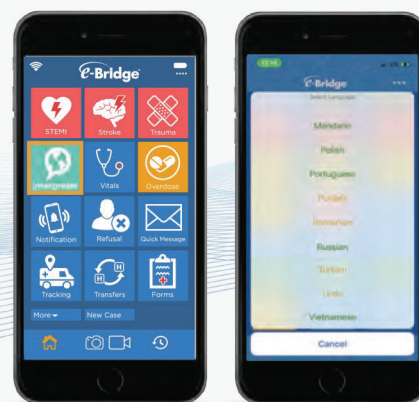

With more than 8 percent of people living in the U.S. classified as Limited English Proficient (LEP), this poses a challenge to emergency medical services (EMS) and hospitals who have an obligation to provide equal care for all for compliance with ADA and other regulations.

Through *e-Bridge Interpreter*, healthcare teams can communicate with LEP patients through a live video language interpreter, supporting a wide variety of spoken languages and ASL.

Value of Video Language Interpretation in Patient Care

- Provide visual cues and facial expressions to enhance the interpretation experience
- Offer the same level of care to LEP (Limited English Proficient) patients
- Quicker access to the languages needed to serve all demographics
- More easily accessible and cost-effective compared to onsite interpreting

Facts & Features

- Connect in 30 seconds or less
- 240 Languages Available Including ASL
- 60 Second Reconnect logic
- HIPAA-Secure
- 91% video fill rate
- Video Conferencing Available
