

Enhance EMS and Hospital Communication with the GD Solution Suite

EMS can send important patient details from the field through pictures, audio, live video consultations, forms, and acute care workflows quickly and efficiently

At the emergency department, staff can easily track all incoming patients by consolidating all calls, radio, emails, and e-Bridge alerts into one system and display incoming patients with the emergency department dashboard featuring patient tracking details

Specialty care team members are ready at the push of a button with alerts and activations that can happen from EMS in the field or the ED with access to all captured patient details
